

## STORAGE HEATERS REPORTED TO CONTAIN ASBESTOS

### LIST INFORMATION:

This list is based on one previously created and maintained by the Asbestos Information Centre Limited (AIC) at [www.aic.org.uk](http://www.aic.org.uk). The company AIC was dissolved in 2011 and their website no longer exists.

This version was created in 2024 by [jwflame / flameport.com](http://jwflame.com) and is placed into the public domain.  
<https://creativecommons.org/publicdomain/zero/1.0/>

Some entries have been updated with information from manufacturers that still exist. A column previously marked 'unknown' has been merged into the 'containing asbestos' list as the majority of those entries were highlighted as high risk, indicating they did indeed contain asbestos.

### ASBESTOS INFORMATION:

Although the information on this list is old, most storage heater manufacturers stopped using asbestos from 1975 onwards and the majority of heaters on this list are well over 50 years old. There should not be any instances of new entries being required on this list.

Blue and brown asbestos was banned in the UK in 1985.  
 White asbestos was banned in 1999. No asbestos has been permitted in any UK products or construction since 1999.

Electricaire	Large central air units: 377 E type (grey coloured unit) S Type, SF 6 Type, SB Type (very large chimney breast shape)  Contained medium density semi-rigid insulation slabs of "Caposil HTI" situated more normally as base insulation of the core box containing the storage bricks. This material contained 10/15% brown asbestos.  The S, SF6, and SB Electricaire heaters contain a small sheet of asbestos paper and aluminium foil corrugations 1" thick either side of the fan unit.  Some heaters also contained asbestos cement board.	All units made after 1974 are asbestos free. The last 2 digits of the serial number indicate the year of manufacture.
